Activities relating to energy efficiency and environmental goals throughout the province are one of the main aims of Diputación of A Coruña. In order to achieve these objectives, it has been developing important work as the driving force of the improvement of the energetic and environmental situation in its territory. In this sense, the Provincial Energy Agency of A Coruña was created in May 2006, with the funding of the Intelligent Energy Europe Programme (IEE). This Agency is part of a European partnership, where other three Agencies, from Lapua City (Finland), Podckapackie (Poland) and Popovo (Bulgaria) are participating.

Diputacion of A Coruña is a 3rd level participant in the Aspire Project, with the aim to promote the establishment of Sustainable Energy Communities within the province and contribute to the promotion of these energies, raising awareness among citizens, enterprises and authorities of the lack of conventional energy resources and the need of using renewable energies. In the framework of the project, Carballo, As Pontes and Cerceda were chosen to be involved in the establishment of SECs and its election was not by chance, As Pontes and Cerceda have a important mining tradition and Carballo is promoting activities related to the goals of this project. In order to know more about these municipalities:
