Your Home

- How many people usually occupy your home?
- How much did you pay for electricity in the last year?
- How much did you pay for gas in the last year?
- How much did you pay for oil or coal in the last year?

Renewable Energy

Do you have any renewable energy at home? Please tick the statements that apply to you

- I don't have any renewable energy at the moment
- I'm signed up to a "Green Tarriff" with my usual electricity supplier
- I have Solar PV Cells generating electricity
- I have Solar thermal tubes or flat plates making hot water
- I have a small wind turbine Size in kWp Manufacturer
- I have a Ground source heat pump Size in kWp Manufacturer
- I have a wood burning stove or fireplace (with or without a back boiler)
- I have a wood burning central heating boiler
- I have a Micro CHP Boiler that makes both heat and electricity for your own home
- I have another renewable technology

Is your property using energy from a shared community heating scheme provided by your landlord?

Yes // No

Are you interested in installing renewable energy in your home, or if you already have one of the above, another type of renewable energy?

Yes // No

What are the main things preventing you from getting renewable energy into your home? Please tick as many as apply.

- I need help to explain how each technology works
- I need help to decide the right type of renewables for my property
- I need permission from my landlord
- I need help with planning permission or advice on whether I need planning permission at all
- I need help to locate the best suppliers and installers in my area
- I need a grant and also help to find the best grant and complete the application forms
- I need help to work out the cost/benefit and payback times
- I need help to work out how much CO₂ I would actually save
- I feel confused and cannot trust advice because different stories appear in the news each week
- I don't think there is any point in me trying to save CO₂, it's a problem for the government/industry/the rest of the world
- I would be interested, but I simply cannot afford to consider installing energy efficiency measures or renewable technology in my home.

Community Energy Plus have the skills, knowledge and staff to be able to give you this advice under any new government scheme that may be introduced. If the householder were asked to pay something towards the cost of this advice, **what is the maximum or highest amount you would be prepared to pay? Tick just one of these options.**

- Nothing, the service should be free
- Up to £100 for a single visit if it covered most of the things I needed to know
- Up to £150 for a single visit if I got extra help completing grant forms and planning applications

Please tick the statements below that apply to you.

I need someone to contact me now to advise me on installing renewable energy in my home

I'm interested in the Aspire project work and our local school/community building/church needs help with ideas for renewable energy

I would be willing to be contacted by Community Energy Plus by phone to talk about this survey in more detail

I would like to receive updates from Community Energy Plus by e mail and my e mail address is

Please tell me if a free or subsidised advice service for renewable energy advice becomes available in the near future

Thank you for completing these questions Your answers are important to help us develop our service to the local community
